GlocalMe campaign

These days, you almost expect to have Internet access anywhere you go. Sometimes, when you go abroad there are missing connections or technological incompatibilities that make an Internet connection almost impossible. GlocalMe will solve these problems by introducing its cloud SIM technology and a never-before-seen smart user interface.

Simply put, GlocalMe is redefining the way we stay connected to the network globally.

We're doing this two ways.

You can connect your tablet, your phone, and your laptop to the best network no matter where you are. GlocalMe keeps you online wherever you are without roaming charges.

Manage your data usage smartly and effectively through GlocalMe's user interface and App.

GlocalMe at a glance

How was GlocalMe born

Internet connection has become one of the main needs of people in our days. This is why about 40% of all the people find it the most annoying aspect of traveling.

This fact prompted us to dig deeper into a solution where we started to envision "GlocalMe" and all the possible benefits.

A future without SIM

To break away from tradition - SIM card is a carrier of restrictions, whereas GlocalMe's Cloud SIM technology allows users to enter different operators' networks, and gives people more freedom and effectiveness when moving from one country to another.

Cloud Sim technology, which means it requires no local SIM Card to connect, and users can travel without worrying about signals and coverage to more than 100 countries in the world.

While there are several top competitors in the market when it comes to providing international internet service, ours is heads and shoulders above the rest.

	GLOCALME VS TOP COMPETITORS		
	 GLOCALME	 APPLE SIM	 Google
Technology	Cloud Sim	Universal SIM	Virtual SIM
Vessel	Smart Hotspot	SIM Card	Mobile
Availability	✓ Any Devices	Limited	Limited
Coverage	✓ Global	Limited	Global
Data Speed	✓ Global 4G	Limited	Limited

Data speed

1000000000

100000000

10000000

Unlike the Apple SIM which only connects on Apple's mobile devices or Google Project Fi focused on Nexus 6 respectively, GlocalMe is offering its availability for all types of devices and software. It is also offering network compatibility with a number of carrier networks in 100+ countries around the world.

The Apple SIM network compatibility is only universal in name since major carriers like AT&T are blocking the services for Apple SIM. Where network compatibility with Google Project Fi is concerned it is only available for Sprint and T-mobile while the data speed becomes limited to 256Kbps in many areas outside of the US. The coverage and service offered by GlocalMe is again very noteworthy because this is the only project of its kind that offers worldwide 3G/4G network. GlocalMe therefore takes an edge over Apple SIM and Google's Project Fi

Hotspot doesn't need to be dumb

Smart-hotspot operating system, touch-screen interactive features, and the GlocalMe APP allow users to manage the data usage effectively and smartly.

- Track detailed interaction with the data
- Connect to personal network
- Purchase data

More functions coming soon

Best-value data rates

GlocalMe brings affordable, predictable and flexible rates to fit your need:

No Roaming -- Avoid the high data roaming charges all over the world.

No Contract, Unlocked -- Only pay for the exact amount of data you use.

DATA PRICE COMPARISON WITH MAJOR OPERATORS					
	GLOCALME	AT&T	T-MOBILE	VERIZON	SPRINT
PAYG (per MB)	✓ US \$0.056	US \$0.10	US \$0.10	US \$0.10	US \$0.10
Package	✓ 1GB \$33	1GB \$33	1GB \$33	1GB \$33	1GB \$33
	✓ 1GB \$33	1GB \$33	1GB \$33	1GB \$33	1GB \$33
	✓ 1GB \$33	1GB \$33	1GB \$33	1GB \$33	1GB \$33

Our pricing is completely transparent, and there are no hidden costs or surprise changes in the terms our clients sign up for. We protect our clients from shocking, expensive international roaming charges.

GlocalMe offers even better deals exclusively for the Kickstarter community.

\$149 one G2 + 1GB worldwide data
 \$299 one G2 + 9GB worldwide data
 \$699 one G2 + unlimited worldwide data

Pick a suitable plan using GlocalMe's App or website if you need more data, and enjoy the hassle-free global connection. GlocalMe's pricing options include 1GB worldwide package for \$33, and Pay-As-You-Go for \$0.056/MB

*Packages provided on Kickstarter (200MB, 1GB, 3GB, 9GB) have one-year validity, whereas packages on GlocalMe's app and website (\$33/1GB) are valid for 180 days.

Sharing connection makes networking more fun

GlocalMe G2 supports up to 5 devices connected simultaneously. Through the smart UI, users are able to monitor the amount of device connected to the GlocalMe network.

Two SIM card slots for your favorite destinations

G2 can also be used as a traditional unlocked Wi-Fi hotspot with the insertion of local SIM card so as to receive local 3G / 4G network signals.

What else?

The last but sometimes the most convenient feature: It acts as an additional battery and saves you from the trouble bringing a bulky power bank. Battery Pack 6000 mAh will recharge a standard smart phone over 3 times.

Large battery also lasts for up to 15 hours of continuous use.

Global testing

We have been doing some tests on GlocalMe's very first model, the G1, and networks throughout the world since 2014.

Quotes by users who have tried our prototypes all over the world.

★★★★★ **Must have for traveling abroad as wifi hotspot - super easy to use and it just works!**

By [Tara L. Smith](#) on Aug 27, 2015

Verified Purchase

Just got it for trip to Canada. Works well with other mentioned. Very simple. Turn it on, wait for blinking red light to turn on and then you are ready to go.

★★★★★ **Global Connectivity and fast customer service**

By [Estelita S. Hernandez](#) on Oct 20, 2015 **TOP 500 REVIEWER**

If you are a world traveler and need to be connected online, this is a nice device to have. I got to the emergency's altitude when still at home, pay the monthly rate with your credit card, and then it will connect that immediately into 4G LTE. The website and portal is easy to use, it will let you know how much data you are using. Just remember that traveling in Europe cost a bit more than in the US, yet it does not make a difference. I couldn't believe it, it's so easy to use and it just works.

★★★★★ **Excellent Tech for us non-tech types!**

By [Wendy Chao](#) on Jan 17, 2015

Verified Purchase

Just back from 11 day trip to Italy with family of four and this is perfect for those short on the country's multiple cellular flight.

★★★★★ **Five Stars**

By [David S. Smith](#) on May 20, 2015

Verified Purchase

Working well. Even in countries with poor cell tower coverage.

★★★★★ **Very nice saving!**

By [Stan D. Smith](#) on Aug 20, 2015

Verified Purchase

I travel internationally very often, mainly to Canada, Mexico, China, Japan and Europe. My Verizon iPhone gets messages/emails from all over the world, the data roaming is very expensive. Typically Verizon charges \$20 per MB or \$25 for 100MB. For one week travel, I need about \$100 data. Two weeks ago I used Glocalme while traveling in UK. All I need was EUR10 (200MB) data. Very nice saving!

★★★★★ **Setup is extremely easy. Have tested it in the US and will**

By [L. Smith](#) on June 10, 2015

Verified Purchase

The device is small and compact. Setup is extremely easy. Have tested it in the US and will take it to Ireland to try in August. The wifi speed and connection are very good. I have recommended it to two of my co-workers for their travels and they both said they are planning on buy one soon. I will do an update when I get back from Ireland.

★★★★★ **Perfect for International travel - impressed!**

By [L. Smith](#) on July 10, 2015

Verified Purchase

This was one of my best purchases of the year! Went on vacation to Italy with our family and my husband needed consistent access to wifi for work. Rather than purchase an international plan for our phones or get a SIM card in Italy, we chose instead to purchase this device. The benefit was huge. Not only was it consistent access and easy to use, but it allowed us to use Internet everywhere we traveled including Italy & Germany. After the initial purchase we we chose to purchase the worldwide data plan. We were able to connect up to six devices which allowed other family members to use the Wi-Fi as well. We ended up re-upping the data plan while we were traveling. This was very easy to do with the App. I would highly recommend this product!

★★★★★ **Hoy, it worked!**

By [L. Smith](#) on July 10, 2015

working perfectly

The initial setup went fine following their directions and once the account was set up, it worked exactly as advertised. We just returned from a trip to the south of France and if there was cell service, this usually connected. It's not crazy fast but it's certainly adequate. It came in handy for a variety of "I really need web access right now" issues. The only time we had trouble with it connecting was when we were driving but I can't really fault the device for that.

GlocalMe's worldwide network currently covers 190+ countries. The coverage may change over time.

Some local mobile operators may implement data throttling and slow down user's unlimited data connection.

My story

I have always loved to travel and share my photographs and experiences with others. But I haven't always found internet service whenever I go, and sometimes, when I do, I've found that my wireless carrier has slapped me with fees and other bogus charges. To get mobile service, I had to collect local SIM cards and figure out how to use them with my phone and my network. It was just a hassle. Finally, I had enough, so I decided to create my own technology that would let me connect with my friends and family no matter where I went or what I saw.

Team members

Founders of GlocalMe are ex-Huawei engineers and specialists who've aligned to provide the largest roaming mobile virtual network operator (MVNO) to international travelers throughout the world. Our mission is to be the global mobile internet access entrance for everyone, and to be the global integrator of mobile broadband data services above all other competitors.

How it works

PLAY

Cloud SIM - The smart switch between mobile networks in over 100 countries

Through our patented Cloud SIM technology, GlocalMe taps into a world's worth of SIM cards that are located throughout the globe. Our SIM cloud continues to grow leaps and bounds as we tap into new countries. By turning on the G2, your device will find the most optimal network and the corresponding SIM card in the cloud SIM which starts to convert the local mobile connection into Wi-Fi signals, making sure that it's within "domestic" roaming boundaries, and saving you, the user, from international charges.

G2 is the world's first global 4G Wi-Fi hotspot. Even as advanced as Google's Project Fi, our competitors don't have the worldwide 4G coverage, and their networks only function at a slow data speed.

G2 overview

1. Tough, durable fingerprint-proof glass panels that use comprehensive steel processing, with the addition of explosion-proof membranes to increase the strength and toughness even further.

2. The device's casing side uses the latest CNC technology with extreme processing of up to 30,000 rpm. It is also surgically and precisely made by using superb crafting techniques such as sandblasting, cutting, laminating, oxidation and highlighting.

Global coverage

GlocalMe service covers 100 countries worldwide! We have included the most exciting travelling destinations! We are discovering and covering more of your favourite places every month!

Now you can help

Funding will allow us to implement technology, cooperate with local operators, and develop new applications that allow us to provide the fastest, most efficient service to our customers. We'll be able to conduct important research that will help us provide the lowest cost products for customers like you. Empower us to make this vision a reality with a donation to this project today!

Join Us

Does your business operate overseas, in more than one country, or send workers to multiple countries? Partner with us to provide your employees with safe, secure, efficient Internet and mobile services. We're also looking for developers and technology enthusiasts to help us make our product better for everyone in the world.

Spread the Word

Visit our sites for more information on the GlocalMe here:

Risks and challenges

-We wish to create an entirely new space and platform for people and data to communicate with each other in a faster and smarter way. Our platform shows great promise and an even greater potential, but is ultimately hampered by current technological limitations, global conditions and other unknown factors. As such, we are still unable to exactly pinpoint the date and manner in which we could fully achieve our goals.

-Of the 100 countries that were covered by GlobalMe's network, the overall device's signal quality ultimately depended on the 3G and 4G network service provided by local operators. There were situations and instances where some areas were not covered by their local network provider, and produced a weak signal or none at all.

-The delivery period may vary, depend or change according to the current situation, but shipping should be expected within a month after the end of the project. In addition, we will assign team

members to assist with production and supply chain management to make sure that all our products are thoroughly tested, meet high margins in quality standards, and flow along smoothly while upholding excellent supply chain ethics.
